Summary
Final-year computer engineering student focused on machine learning and NLP. Built course projects in text classification and image classification, with a summer internship doing data analysis for a small fintech startup.

Skills
Python, Machine Learning, Deep Learning, TensorFlow, Keras, Scikit-learn, NLP, Computer Vision, CNN, SQL, Statistics, Data Analysis, Git

Projects
- Sentiment analysis on product reviews: cleaned 40k reviews, compared Naive Bayes, logistic regression and a small neural network; wrote up why the simple models were hard to beat. Used cross-validation throughout.
- Plant disease image classification with a CNN built in Keras; dataset augmentation to handle class imbalance.
- Payment fraud EDA during internship: exploratory data analysis on transaction logs, found leakage in one feature the team had been using.

Education
B.E. Computer Engineering, 2023-2027 (expected)
